SUMMARY

Full-stack web developer with hands-on experience building production-grade MERN stack applications, AI-integrated tools, and responsive user interfaces. Proficient in React, Node.js, MongoDB, and REST API development. Passionate about developer tooling, AI integration, and delivering clean, scalable software solutions.

EDUCATION

Rajiv Gandhi Proudhyogiki Vishwavidyalaya
Bachelor of Technology in Computer Science Engineering

Bhopal, Madhya Pradesh
Aug. 2021 – May 2025

PROJECTS

CodePilot AI – AI-Powered Code Editor | *React, Node.js, Monaco Editor, Anthropic API, GitHub OAuth* 2025

- Built a full-featured browser-based code editor using Monaco Editor (the engine powering VS Code), supporting multi-language syntax highlighting and intelligent code editing
- Integrated an AI coding assistant (CodePilot) powered by the Anthropic Claude API, enabling users to generate code, debug errors, explain snippets, and ask programming questions in natural language
- Implemented a hierarchical file system manager allowing users to create, rename, delete, and navigate files and folders directly within the browser, persisting state across sessions
- Built GitHub OAuth authentication using Passport.js so users can securely sign in, save projects to their account, and sync code to GitHub repositories
- Designed a clean split-pane UI with a file explorer sidebar, Monaco editor panel, and a collapsible AI chat interface, optimized for developer productivity
- Built RESTful CRUD APIs using Node.js and Express.js for complete file and folder management – supporting create, read, update, and delete operations with nested directory structure handling

RandomConnect -Real time communication System | *React, Node.js, WebRTC, Socket.io, JWT, MongoDB* 2024

- Built a real-time random video calling platform that matches two anonymous users instantly using a server-side matchmaking queue, similar to Omegle, powered by WebRTC peer-to-peer connections
- Implemented WebRTC with ICE candidate exchange and SDP signaling via a Node.js signaling server, enabling low-latency, high-quality video and audio communication directly between browsers
- Integrated Socket.io for real-time bidirectional chat messaging during active calls, handling room creation, user join/leave events, and graceful disconnection with automatic re-queuing
- Secured all API endpoints and socket connections using JSON Web Tokens (JWT), ensuring only authenticated users can enter the matchmaking pool
- Designed a responsive React UI with live connection status indicators, a mute/camera toggle controls bar, and an in-call chat panel for seamless user experience
- Handled edge cases including peer disconnection recovery, tab visibility changes, and ICE connection failure fallback to maintain call stability

Pulse Time- Watch E-Commerce Website | *MongoDB, Express.js, React, Node.js, Redis* 2024

- Developed a full-stack MERN application with RESTful APIs for efficient client-server communication
- Designed and managed database schemas using Mongoose with MongoDB as the primary database
- Implemented secure user authentication and authorization using JSON Web Tokens (JWT)
- Integrated Redis for caching frequently accessed data, reducing average API response time

TECHNICAL SKILLS

Languages: JavaScript (ES6+), HTML5, CSS3

Frameworks & Libraries: React.js, Node.js, Express.js, Redux, Tailwind CSS, Passport.js, Monaco Editor, Socket.io, WebRTC

AI & APIs: Gemini API, REST API Design, GitHub OAuth, EmailJS

Databases & Caching: MongoDB, Mongoose, Redis

Developer Tools: Git, GitHub, VS Code, Postman, npm
